

# Fundamental Programming Course

## Week 8

Huseh-Ting Chu@Asia University, 2022

# Schedule

# Syllabus

- W1-Python Introduction and Programming Tools
- W2-Variables and Operations
- W3-Loop and formatted output
- W4-Condition and Containers
- W5-String and built-in functions
- W6-M1 test
- W7-Dictionary Container
- **W08-File I/O**
- W09-Function
- W10-Advanced flow control
- W11-Advanced operations and generators
- W12-M2 test
- W13-Advanced functions
- W14-Class fundamentals (classes, objects, properties, constructors, methods)
- W15-Advanced Classes (Static methods, class Methods and class decorators)
- W16-Modules and Packages
- W17-Advanced programming(Argparse and Venv)
- W18-M3 test

# Outline

- Week9 - File Handling
  - Topic 1 - writing to archives: open() and print() functions
  - Topic 2 - read file: open() and for line in fin
  - Topic 3 - reading and writing archives: f.read() and f.write()
  - Topic 4 - using **with**
  - Topic 5 (Topic 5) - Sorting
  - Topic 6 (Topic 6) - Review variable types
  - Topic 7 (Topic 7) - Decimal number operations
  - Topic 8 - Review Formatted Output

# IPO Model (W9)

從檔案輸入資料  
I/O函數:open()  
I/O函數:read()

使用for 迴圈讀入檔案內容  
with/as的使用  
資料排序, sorted()函數  
內建函數max()/min()函數

I/O函數:close()  
I/O函數:write()

# Topic 1-open() and print()

```
fout = open('score.txt', 'w')  
for score in scores:  
    print(score, file=fout)  
fout.close()
```

# Topic 2-for line in fin

```
count=0
fin=open('score.txt')
for line in fin:
    count +=1
fin.close()
print(f"The number is {count}")
```

# Topic 3: f.read() and f.write()

- Methods of File Objects:
  - f.read(size)
  - f.readline()
  - f.write(string)
  - f.seek(5)
  - f.tell()
  - f.close()

# Topic 4-using with

```
count = 0
```

```
total = 0
```

```
with open('score.txt') as fin:
```

```
    for line in fin:
```

```
        count += 1
```

```
        total += int(line)
```

```
print(f"Average score= {total/count:.2f}")
```

# Topic 5-sorting

- Using `obj.sort()`
- `scores.sort(reverse = False)`
- `scores.sort(reverse = True)`
  
- Using `sorted()` function
- `sorted(scores,reverse = False)`
- `sorted(scores,reverse = True)`

# Topic 6: variable types

- Numeric types: int, float, bool
- String type: str
- A character is also a string
- Container type: list, tuple, set, dict

Function	Description
chr()	Converts an integer to a character
ord()	Converts a character to an integer
len()	Returns the length of a string
str()	Returns a string representation of an object

# Topic 7- Decimal

```
a = round(Decimal('0.70') * Decimal('1.05'), 2)
b = round(.70 * 1.05, 2)
print(f"{a}")
print(f"{b}")
```

# Topic 8-Formatting

## %-formatting

```
print('Art: %5d, Price per Unit: %8.2f' % (435, 59.058))
```

## str-format ( Python 2.6+ )

```
print("Art: {0:5d}, Price per Unit: {1:8.2f}".format(435, 59.058))
```

## f-string ( Python 3.6+ )

```
A = 435; B = 59.058
```

```
print(f'Art:{A:5d}, Price per Unit: {B:8.2f}')
```

```
>>> n = 27
```

binary	octal	hex	HEX	decimal
<code>f"{n:7b}"</code>	<code>f"{n:7o}"</code>	<code>f"{n:7x}"</code>	<code>f"{n:7X}"</code>	<code>f"{n:7d}"</code>
'  '	'  '	'  '	'  '	'  '

Thanks!

Q&A
